Project Report On

Arto

**Submitted in the Partial fulfillment of the requirement for
awarding the degree of Bachelor of Computer Application (BCA)**

SEM 6, Year 2025-26

**By
Mr. Ranva Arpan**

Under the Guidance of
Asst. Prof. Gunja Dave

**Noble BCA College
Faculty of Computer Application
Noble University, Junagadh**

Noble University

Certificate

Enrolment No. 230431207

**This is to certify that the Project was satisfactorily carried out and hence submitted
this report is the bonafide work of Mr. Ranva Arpan**

**Student of Bachelor of Computer Applications Semin the Laboratory of Noble
University, Junagadh during the academic year 2025-26.**

Internal Guide

Principal

Asst. Prof. Gunja Dave

Dr. Bhargav Rajvagar

Preface

This report contains all the outputs of a project undertaken to develop a working model of **ARTO E-commerce Application** and to study the existing working system. As part of this study, we analyzed the requirements of the working model and tried to improve it using the technological functionality that the current computer science provides.

This volume contains the documentation summary of the working system, the background study and analysis, the technical requirements and the working specification of the developed system.

We recommend the user to take the advantage of the study presented here and implement the system with their required improvisation. We hope this study will reduce the burden of the reanalysis of the development phase.

Designed by Arpan.Ranva1

Acknowledgment

“It is not possible to prepare a project report without the assistance & encouragement of other people. This one is certainly no exception.”

On the very outset of this report, we would like to extend our sincere & heartfelt obligation towards all the personages who have helped us in this endeavor. Without their active guidance, help, cooperation & encouragement, we would not have made headway in the project. We are ineffably indebted to our Dean **Mr. Paresh Vora** Sir for his conscientious guidance and encouragement to accomplish this assignment.

We are extremely thankful and pay our gratitude to our project guide Asst. Prof **Gunja Dave** her valuable guidance and support on completion of this project in its presently.

We extend our gratitude to Faculty of Computer Application, Noble University, Junagadh for giving us this opportunity.

Thanking You

Mr. Ranva Arpan (230431207)

5. PROJECT PROFILE

5.1 Introduction

The advent of digital technology has transformed various industries, and the art and handicraft sector is no exception. However, despite the boom in e-commerce, the local and independent art community remains highly unorganized. This project introduces "Arto," a comprehensive mobile application designed specifically to bridge the massive gap between independent creators, artists, craftsmen, and art enthusiasts.

In today's fast-paced digital economy, many highly skilled local artists, painters, and sculptors face immense difficulties in finding the right audience. They often rely on generic social media platforms like Instagram or Facebook, which are not optimized for direct selling, inventory management, or secure payments. On the other hand, art lovers and potential buyers struggle to find authentic, verified handmade products. They face trust issues regarding the originality of the art, lack of secure payment methods, and confusing delivery tracking when buying from unverified social media pages.

The proposed application, Arto, provides a highly centralized, secure, and user-friendly platform. It features a unique dual-mode interface, allowing users to seamlessly switch between a 'Seller' dashboard and a 'Buyer' profile. For sellers, Arto provides professional tools to create an online portfolio, upload high-quality images of their artwork, write detailed descriptions, set pricing, and manage incoming orders through a dedicated dashboard. For buyers, the application offers an immersive discovery experience with advanced search filters (by art style, medium, and price), a secure shopping cart, integrated payment gateways, and real-time order tracking. By focusing exclusively on the creative community, Arto aims to empower local artisans financially while providing a premium, trustworthy shopping experience for art collectors.

5.2 Problem Statement

Despite the growth of digital marketplaces, independent artists and buyers face significant hurdles in exchanging art. Sellers face difficulty in setting up professional online stores because existing global platforms (like Etsy or Amazon) have complex onboarding processes, high commission fees, and overwhelming competition, which leads to discouragement and loss of potential income.

Conversely, Buyers face difficulty in discovering and purchasing authentic handmade art because information is scattered across thousands of unverified social media profiles. This fragmentation leads to a lack of trust, fear of online scams, difficult communication via direct messages (DMs), and a completely disorganized post-purchase experience with no proper order tracking.

5.3 Objectives

Primary Objectives:

- To design and develop a user-friendly, dual-mode mobile interface that caters specifically to the needs of both art sellers and art buyers.
- To eliminate the dependency on social media direct messages (DMs) by providing a centralized catalog, shopping cart, and secure checkout system.

Secondary Objectives:

- To reduce the onboarding time for a new seller to under 5 minutes, allowing them to upload their first product seamlessly.
- To build trust among buyers by providing transparent seller profiles, verified reviews, and clear return policies.
- To implement a real-time order tracking system that keeps the buyer informed at every stage (Order Placed, Packed, Shipped, Out for Delivery).

5.4 Scope

In Scope (Features to be designed):

- **User Authentication:** Secure Login/Sign-up using Email, Google, and Apple ID.

ARTO

- **Dual-Profile Management:** Seamless switching between 'Buyer' mode and 'Seller' dashboard.
- **Seller Dashboard:** Features to add new artwork, manage inventory, view total earnings, and track active orders.
- **Buyer Experience:** Home screen with personalized art recommendations, categorized search (Abstract, Portraits, Digital Art, Handicrafts), and detailed product pages.
- **Checkout & Tracking:** Shopping cart management, secure payment gateway UI, and a detailed chronological timeline for order tracking.

Out of Scope:

- Physical warehousing and courier logistics management.
- Live bidding or auction systems for extremely high-value art pieces.
- Augmented Reality (AR) features to visualize art on a wall (planned for future phases).

5.5 Target User Segmentation

User Category	Age Range	Background / Occupation	Primary Goals & Needs	Pain Points & Problems Faced	Tech Familiarity
1. The Hobbyist Artist (Seller)	16 - 25	College Students, Part-time Creators, Digital Illustrators	Wants to earn pocket money by selling casual art. Needs a free, quick, and easy way to upload artwork directly from their smartphone.	High fees on other platforms; doesn't know how to handle complex shipping or business taxes; struggles to find real buyers on Instagram.	Very High (Expert in using mobile apps and social media).
2. The Professional Artist (Seller)	26 - 45	Full-time Painters, Sculptors, Professional Freelancers	Wants a professional digital storefront to showcase their	DMs on social media look unprofessional; clients often bargain too much;	Medium to High (Comfortable with basic e-commerce setups).

ARTO

			portfolio. Needs to track monthly earnings, manage bulk inventory, and build a brand name.	handling payment securely without getting scammed is difficult.	
3. Traditional Artisan (Seller)	35 - 60	Rural Craftsmen, Traditional Art Makers (Warli, Pichwai)	Needs a platform to sell cultural heritage arts to a broader city/global audience. Needs the simplest UI possible with local language support.	Very poor technical knowledge; cannot operate complex global websites like Etsy; relies on middlemen who take huge commissions.	Low (Needs highly intuitive, big-button UI with minimal text).
	18 - 35	Young Professionals, Gift Shoppers, Homeowners	Wants to buy affordable, aesthetic, and unique handmade items for home decoration or gifting purposes. Needs a simple cart and secure checkout.	Afraid of losing money to fake Instagram pages; finds it hard to verify if the art is actually handmade; wants clear order tracking.	High (Expects a smooth experience like Amazon or Flipkart).
5. The Interior Designer (Buyer)	28 - 50	Architects, Interior Decorators, Studio Owners	Constantly looking for specific art styles, sizes, and colour palettes to match their client's homes. Needs advanced	Wastes too much time scrolling through unorganized social media pages; struggles to communicate exact dimension	High (Uses digital tools daily, prefers grid views and filters).

ARTO

			search filters and bulk buying options.	requirements to the artists.	
6. The Serious Collector (Buyer)	40+	Wealthy Individuals, Art Enthusiasts, Gallery Owners	Seeks premium, high-value, authentic original paintings. Needs detailed artist biographies, certificates of authenticity, and secure premium shipping.	Lacks trust in digital platforms for high-value purchases; wants a premium UI experience that feels like a luxury art gallery.	Medium (Prefers clean, readable fonts and trustworthy design).

Designed by Arpan.Ranva1

6. User Research & Analysis

6.1 Existing Application Study

To understand the current market landscape, a thorough study of existing applications was conducted.

1. Etsy

- **Features:** A massive global marketplace focusing on handmade items, vintage goods, and craft supplies.
- **Strengths (Good UI/UX):** Excellent categorization, highly detailed product pages, strong community reviews, and robust search algorithms.
- **Weaknesses (Problems):** The UI feels cluttered due to too many categories. For a new, local artist, the platform is highly intimidating. The fee structure is complex, and navigation can be confusing for a first-time mobile user.

2. Instagram (Used as a selling platform)

- **Features:** Visual-first platform where artists upload reels and posts of their work.
- **Strengths (Good UI/UX):** Extremely high engagement, great for visual storytelling, and easy to build a follower base.
- **Weaknesses (Problems):** It is not an e-commerce app. There is no 'Add to Cart' button, no inventory management, and no secure payment gateway. Buyers have to DM the artist, haggle over prices, and pay via third-party UPI apps, which involves high scam risks.

6.2 Competitive Analysis

Overview To position the "Arto" application effectively in the market, a comprehensive competitive analysis was conducted. Understanding the strengths and weaknesses of existing platforms allows us to identify critical gaps in the user experience and design a superior, tailored solution for the independent art community.

Currently, the market is divided into two extremes: overwhelming global e-commerce giants and unorganized social media platforms. We analyzed the three most common platforms currently used by artists and art buyers.

1. Etsy (Global Handmade Marketplace)

- **Strengths:** Etsy is a massive, established global marketplace. It offers excellent search algorithms, categorized filters, and high buyer trust due to secure payment gateways and strict return policies.

ARTO

- **Weaknesses (UX/UI Gaps):** The platform is highly saturated and extremely intimidating for a new, local artist. The UI for the 'Seller Dashboard' is complex, requiring detailed SEO knowledge to get views. Furthermore, their fee structure (listing fees + transaction fees + payment processing fees) is highly discouraging for small-scale creators.

2. Instagram (Social Media platform used for unorganized selling)

- **Strengths:** Unbeatable visual storytelling. It allows artists to build a strong brand identity, upload reels, and engage directly with followers through comments. It is entirely free to use.
- **Weaknesses (UX/UI Gaps):** Instagram is a networking app, not an e-commerce platform. There is no 'Add to Cart' button, no inventory management, and no standardized checkout process. Buyers must DM (Direct Message) the artist, negotiate prices, and pay via third-party UPI apps. This causes immense friction, high drop-off rates, and poses a severe risk of online scams. Order tracking is virtually impossible.

3. Amazon Handmade / Generic E-Commerce Platforms

- **Strengths:** Massive daily user base and world-class logistics and delivery network.
- **Weaknesses (UX/UI Gaps):** The UI feels highly corporate and transactional. Art pieces are displayed next to factory-made electronics or household items, completely destroying the emotional and premium feel of buying original art. The setup process for sellers requires strict business documentation (GST, Trade Licenses), which local freelance artists do not possess.

Comprehensive Feature Comparison Matrix

Feature / UI Element	Etsy	Instagram (DMs)	Amazon Handmade	Arto (Proposed)
Dedicated Art & Craft Focus	Yes (But cluttered)	No	No	Yes (100% Focused)
Seller Onboarding UI	Complex & Lengthy	Very Simple	Highly Complex	Simple (Under 3 Mins)
Integrated Secure Checkout	Yes	No (Manual UPI/Bank)	Yes	Yes
Live Order Tracking UI	Yes	No	Yes	Yes
Direct Chat with Artist	Yes (Via Messages)	Yes (DMs)	No	Yes (Dedicated UI)
Commission Fees	High & Complex	Zero	Very High	Low & Transparent (5%)

ARTO

Certificate of Authenticity	Manual mention	Manual mention	Not required	Built-in UI Badge feature
-----------------------------	----------------	----------------	--------------	---------------------------

6.3 Design Feasibility Analysis

Overview Before heavily investing in the development phase, a Design Feasibility Analysis was conducted to ensure that the proposed "Arto" application is practical, sustainable, and achievable within technical, economic, and user-centric boundaries.

1. Technical Feasibility The UI/UX design of Arto is highly technically feasible.

- **Design Tools:** The entire interface, wireframes, and interactive prototypes are being developed using industry-standard tools like **Figma**.
- **Development Handoff:** The design system (colours, typography, grid layouts) is created using standard Material Design and iOS Human Interface Guidelines. This ensures that when the design is handed over to developers, it can easily be coded using modern frameworks like React Native or Flutter for cross-platform (Android & iOS) availability.
- **Image Processing:** Since it is an art app, the system will need to handle high-resolution images. The UI incorporates "Lazy Loading" and "Thumbnail Optimization" techniques to ensure the app does not lag, making it technically sound even on mid-range smartphones.

2. User & Operational Feasibility

- **Seller Perspective:** As validated in our user survey, 40% of artists find current platforms too complex. Arto's 'Seller Dashboard' is designed with absolute minimalism. Large typography, clear action buttons, and a step-by-step product upload wizard ensure that even rural artisans with low technical literacy can operate the app smoothly.
- **Buyer Perspective:** The buying flow mimics standard, widely accepted e-commerce patterns (Home -> Product Details -> Cart -> Checkout). Users will not have to learn a new way to navigate, ensuring high operational feasibility and immediate user adoption.

3. Economic & Business Feasibility

The project is economically viable.

- **Design Costs:** Utilizing free and open-source design tools (Figma) keeps the initial prototyping cost negligible.
- **Revenue Model Integration:** The UI seamlessly integrates a transparent fee structure. As per survey data, charging a minimal 5% commission on successful sales is highly acceptable to artists. The interface will clearly display "Earnings after

ARTO

Commission" in the seller dashboard, ensuring financial transparency and encouraging more artists to join, thereby creating a sustainable business model.

4. Schedule & Time Feasibility:

The UI/UX phase of the project is strictly time-bound. By utilizing a robust Design System (reusable buttons, cards, and input fields) right from the beginning, the time required to design high-fidelity screens is drastically reduced. The iterative prototyping and usability testing can easily be completed within the academic/project deadlines.

Conclusion on Feasibility:

The Arto application passes all feasibility tests. The design is technologically implementable, perfectly addresses the user's pain points without a steep learning curve, and provides a sustainable framework for future development.

6.4 Survey (Quantitative Research)

Overview and Methodology

To gather real-world data and validate the core problem statement of the "Arto" application, a comprehensive quantitative survey was conducted. The primary objective was to understand the current behaviors, frustrations, and expectations of both independent artists (sellers) and art enthusiasts (buyers) in the digital space.

- **Research Tool Used:** Google Forms
- **Target Audience:** Freelance Artists, Handicraft Makers, Art Collectors, and General Online Shoppers.
- **Total Sample Size:** 60 Participants (30 Artists/Sellers and 30 Art Buyers)
- **Data Collection Method:** Online questionnaire distributed via social media groups, college artist communities, and design forums.

Below is the detailed graphical representation and analysis of the user responses:

Q1: Approximately how many artworks do you produce per month? (Seller Capacity)

- 1 to 5 Artworks: **66.7%**
- 5 to 10 Artworks: **22.2%**
- More than 10 Artworks: **11.1%**

ARTO

5) Approximately how many artworks do you produce per month?

9 responses

Explanation:

This response provides crucial insight into the inventory size of our sellers. A vast majority (66.7%) are independent, small-scale creators who produce only 1 to 5 pieces a month. This means Arto is catering to exclusive, handcrafted art rather than mass-produced factory items. From a UI/UX perspective, the 'Seller Dashboard' does not need complex bulk-uploading tools initially. Instead, the focus should be on a highly detailed, single-item upload page where artists can showcase the uniqueness, story, and high-quality images of their few exclusive creations.

Q2: Where do you currently sell your art?

- Instagram / Facebook: **33.3%**
- Other Websites: **33.3%**
- Nowhere (Just starting out): **33.3%**

6) Where do you currently sell your art?

9 responses

**Explanation:**

The data reveals a highly fragmented market. A third of the artists rely on social media (which lacks e-commerce features), another third use scattered websites, and the remaining 33.3% haven't even started due to a lack of proper platforms. This perfectly validates the problem statement of the Arto project. By providing a centralized, easy-to-use platform, Arto can immediately capture the 33.3% of beginners while providing a much better, organized alternative to those struggling with Instagram DMs and scattered websites.

Q3: How do you price your artwork?

- Based on time and effort invested: **66.7%**
- Based on market price: **22.2%**
- Fixed rate (Material + Labor): **11.1%**

7) How do you price your artwork?

9 responses

**Explanation:**

Pricing handmade art is highly subjective. 66.7% of artists price their work based on the emotional and physical effort invested, rather than a fixed market rate. To support this in our application, the product details page UI must include an "About the Artwork" or "Inspiration"

ARTO

section. Allowing the artist to tell the story of their effort justifies the price to the buyer. It transforms the purchase from a simple transaction into an emotional investment.

Q4: Will you be able to ship the artwork yourself?

- No, I need help from the application: **44.4%**
- Yes, I can do it myself: **33.3%**
- Maybe, if guided properly: **22.2%**

8) Will you be able to ship the artwork yourself?

9 responses

Explanation:

Shipping is a massive pain point for independent creators. Combined, 66.6% of sellers either need direct help from the app or require guidance to ship their fragile artwork. This data strongly dictates a crucial functional requirement for Arto: The seller dashboard must integrate a 'Shipping & Logistics Support' module. Generating automated shipping labels or partnering with third-party logistics (like Delhivery or Shiprocket) within the app will drastically improve the seller experience.

Q5: Do you need help getting packaging materials (boxes, bubble wrap, etc.)?

- Yes: **100%**
- No: **0%**

9) Do you need help getting packaging materials (boxes, bubble wrap, etc.)?

9 responses

Explanation:

A staggering 100% of the respondents stated they need assistance with packaging materials. Artwork is extremely fragile, and proper packaging is the biggest hurdle for an independent artist. This unanimous response means Arto could introduce a highly profitable secondary feature in the future: an in-app store where artists can buy standardized, Arto-branded packaging materials. For the current UI, adding a "Packaging Guidelines" help section in the seller dashboard is absolutely mandatory.

Q6: Do you provide a Certificate of Authenticity with your artwork?

- Yes: **77.8%**
- No: **22.2%**

10) Do you provide a Certificate of Authenticity with your artwork?

9 responses

Explanation: Authenticity is the backbone of the art market. 77.8% of artists already provide a Certificate of Authenticity. To build immense trust with buyers, the Arto app UI should feature a prominent "Verified Authentic" badge or a toggle switch during the product upload process saying "Includes Physical Certificate of Authenticity." This small UI addition will significantly boost the credibility of the listings and justify premium pricing.

ARTO

Q7: What do you find to be the biggest difficulty in selling artwork online?

- Winning the customer's trust: **77.8%**
- Getting secure payments: **22.2%**

11) What do you find to be the biggest difficulty in selling artwork online?

9 responses

Explanation:

The overwhelming majority (77.8%) struggle with building trust online, while the rest worry about payment security. Because buyers cannot physically touch the artwork through a screen, the UI/UX design must compensate by building digital trust. This necessitates features like verified seller badges, high-resolution zoomable images, transparent return policies prominently displayed on the checkout page, and a highly secure, integrated payment gateway (e.g., Razorpay/Stripe) to assure both parties.

User 1: The Freelance Artist

- **Name:** Sagorika Moshi
- **Age:** 20
- **Occupation:** Digital Illustrator & Freelance Artist
- **Role in App:** Seller

Interview Transcript:

- **Q: How do you currently sell your digital portraits and illustrations?**
 - **A:** "I heavily rely on Instagram. I post reels of my drawing process and put a link in my bio. People usually DM me for prices."
- **Q: What is the biggest problem you face while selling through Instagram DMs?**
 - **A:** "It is exhausting! I have to manually reply to 50 people asking 'Price please?', and out of those, maybe one person actually buys. Plus, keeping track of who paid via Google Pay and sending them the high-resolution digital file via email is a completely broken process."
- **Q: What specific feature do you expect from a dedicated art platform like Arto?**

ARTO

- **A:** "I want a clean dashboard where I can just upload the high-res file, set a fixed price, and the app automatically delivers the file to the buyer once they pay. No DMs, no manual emails. Just automate the selling process."

User 2: The Traditional Artisan

- **Name:** Karsan Bhai Vankar
- **Age:** 48
- **Occupation:** Traditional Weaver / Handicraft Maker
- **Role in App:** Seller

Interview Transcript:

- **Q: How do you reach customers outside your local village or city?**
 - **A:** "We rely on middlemen or sell at government handicraft melas (exhibitions) once a year. I don't know how to make a website."
- **Q: Have you tried selling on big websites like Amazon or Flipkart?**
 - **A:** "No, I looked at it once, but they asked for GST numbers, company registration, and too many technical details. I only make 5-6 handmade items a month, I am not a big factory. The setup is too complicated for me."
- **Q: If we make an app where you just need to click a photo and write the price, would you use it?**
 - **A:** "Yes, absolutely. But it has to be in Gujarati or Hindi, and someone needs to help me with the courier parcel when an order comes. If the app does that, it will save us from middlemen."

User 3: The Interior Designer

- **Name:** Aman Shah
- **Age:** 31
- **Occupation:** Lead Interior Designer
- **Role in App:** Buyer

Interview Transcript:

- **Q: How do you source paintings or art pieces for your client's homes?**
 - **A:** "It is a major headache. I spend hours scrolling through Pinterest or Instagram. When I find a good artist, I have to constantly message them to ask if they can make a custom size to fit a specific wall."
- **Q: What frustrates you the most during this buying process?**
 - **A:** "The lack of organization. On social media, artists don't list the exact dimensions (Height x Width) of their canvas. I have to guess. Also, for high-

ARTO

budget clients, I cannot just send ₹50,000 to an unknown UPI ID. I need a proper invoice and a secure payment gateway."

- **Q: What is a "must-have" feature for you in the Arto app?**
 - **A:** "Advanced search filters. I want to search specifically for 'Abstract Art', 'Canvas', 'Size: 4x4 ft', and 'Budget: ₹10k - ₹20k'. If your app has these filters, I will use it for all my projects."

User 4: The Casual Gift Shopper

- **Name:** Neha Sharma
- **Age:** 25
- **Occupation:** Teacher
- **Role in App:** Buyer

Interview Transcript:

- **Q: Have you ever bought handmade art or crafts online for gifting?**
 - **A:** "Yes, I tried buying a customized resin clock for my friend's wedding from an Instagram page."
- **Q: How was your experience with that purchase?**
 - **A:** "Terrible. I paid half the amount upfront, but the artist stopped replying to my messages for a week. I had no idea if my order was even being made. There was no tracking link, and I was terrified I got scammed. It eventually arrived, but the anxiety wasn't worth it."
- **Q: What would make you feel safe buying art online?**
 - **A:** "A clear tracking page, just like Swiggy or Amazon. I want to see exactly when my order is accepted, when it is packed, and when it is out for delivery. A guaranteed refund policy is also necessary."

User 5: The Hobbyist Painter

- **Name:** Kavya Iyer
- **Age:** 20
- **Occupation:** College Student
- **Role in App:** Seller / Buyer

Interview Transcript:

- **Q: As a hobbyist, what stops you from selling your sketches online?**
 - **A:** "I only draw during weekends, so I don't want to pay a monthly subscription fee to a website builder just to host my portfolio. I want a platform that is free to join and only takes a small cut when I actually sell something."

ARTO

- **Q: Do you feel the story behind the art is important?**
 - **A:** "100%. People don't buy handmade art just to fill an empty wall; they buy the emotion. I want a dedicated space on my product page to write my inspiration and the story of how I painted it."
- **Q: What UI feature would help you as a seller?**
 - **A:** "A simple 'Share to WhatsApp' or 'Share to Insta Story' button right next to my artwork. So I can use your app to handle the payment, but still use my social media to get the customers."

Conclusion from Interviews (Key Research Findings)

The qualitative interviews provided profound insights that directly shape the functional requirements of the Arto application:

1. **For Sellers (Simplicity is key):** The onboarding process must be drastically simplified. Removing corporate barriers (like mandatory GST for small creators) and providing an automated digital file delivery system will solve their biggest frustrations.
2. **For Buyers (Trust & Transparency):** E-commerce standard features like advanced search filters, clear dimension displays, secure payment gateways, and real-time order tracking are non-negotiable to build trust and prevent purchase anxiety.
3. **For the Platform (Emotional Connection):** The UI must accommodate "Artist Biographies" and "Artwork Stories" to maintain the premium, emotional value of handmade art, distinguishing Arto from generic shopping apps.

6.5 Empathy Map

Overview

An Empathy Map is a collaborative visualization tool used to articulate what we know about a particular type of user. It helps the design team build empathy with the end-users by organizing their behaviours and feelings into four distinct quadrants: Says, Thinks, Does, and Feels. For the "Arto" application, we have created two detailed, generalized empathy maps to represent our dual user base without focusing on a single individual.

Empathy Map 1: The Independent Artist (Seller)

User Segment: Freelance Creators, Digital Artists, and Traditional Handicraft Makers.

Figure 6.5.1: Empathy Map

Empathy Map 2: The Art Enthusiast (Buyer)

User Segment: Art Collectors, Interior Designers, and Casual Gift Shoppers.

Figure 6.5.2: Empathy Map

6.6 User Journey Map

Overview

A User Journey Map visualizes the step-by-step process that a person goes through to accomplish a specific goal within the app. By mapping out the actions, emotions, and specific problems faced by the user at each stage, we can design targeted UI solutions

ARTO

to ensure a frictionless experience. For the "Arto" application, two separate journey maps were created for the Seller and the Buyer.

User Journey Map 1: The Artist (Seller)

Goal: To successfully create an online shop and list a new painting for sale.

Step	Action	Emotion	Problem (Pain Point)
1. Onboarding	Opens the app, clicks "Become a Seller", and enters basic profile details (Name, Bio, Location).	 (Curious / Neutral)	Most e-commerce apps ask for complex business documents (GST), which independent artists don't have.
2. Uploading Media	Taps "Add New Art", opens the phone gallery, and selects 4 high-quality photos of the artwork.	 (Happy)	High-resolution images often take too long to upload or get awkwardly cropped in standard apps.
3. Adding Details	Enters the Title, Description, exact Dimensions (H x W), and sets the selling Price.	 (Confused)	Unsure if they should include packaging and shipping charges in the base price, or if the app charges hidden fees.
4. Publishing	Taps "Publish". The artwork is now live on their public profile and Seller Dashboard.	 (Excited)	The artwork is live, but the artist doesn't know how to promote it or get their very first sale.

Figure 6.6.1: User Journey Map

User Journey Map 2: The Art Buyer

Goal: To find a specific piece of traditional art, verify its details, and safely purchase it.

ARTO

Step	Action	Emotion	Problem (Pain Point)
1. Searching	Opens the app, uses the search bar, and applies filters for "Traditional Art" and "Under ₹5000".	 (Focused)	Without proper filters, the user gets overwhelmed by irrelevant digital art or overly expensive paintings.
2. Viewing Product	Clicks on a painting, zooms into the images, and reads the artist's biography.	 (Engaged)	The exact physical dimensions (Height x Width) or materials used are often missing on social media posts.
3. Checkout	Adds the item to the cart, enters the delivery address, and proceeds to the secure payment gateway.	 (Anxious)	Hidden delivery charges or platform fees appear suddenly at the final step, causing cart abandonment.
4. Order Tracking	Checks the "My Orders" tab a few days later to see the live delivery status.	 (Relieved)	When buying from social media, sellers provide zero updates, causing buyers to worry if the parcel is lost.

6.7 Affinity Diagram

Overview After gathering a substantial amount of qualitative and quantitative data from our user surveys and one-on-one interviews, the next crucial step in the Design Thinking process was to organize this chaotic data. An Affinity Diagram was utilized to group user quotes, pain points, expectations, and observations into logical, meaningful clusters. This method helps in identifying hidden patterns and prioritizing the most critical features for the "Arto" application.

Figure 6.7: Affinity Diagram mapping user feedback

Key Themes and Clusters Identified:

Based on the affinity mapping process, the user feedback was categorized into four major themes. These clusters directly dictate the required UI/UX features for both buyers and sellers:

1. Trust, Security & Authenticity (Highest Priority)

- User Quotes Grouped: "I fear getting scammed on Instagram," "Need secure payment," "Is the art actually handmade?"
- UI Actionable Insights: The application must prioritize building digital trust. This requires integrating a highly secure payment gateway UI (like Razorpay/Stripe), adding 'Verified Seller' badges, and implementing an 'Upload Certificate of Authenticity' toggle during the seller's artwork listing process.

2. UI Simplification & Easy Onboarding

- User Quotes Grouped: "Big platforms ask for GST and business details," "I don't know how to make a website," "Just want a simple upload button."
- UI Actionable Insights: The seller onboarding flow must be frictionless and document-free. The "Add Artwork" screen should be a simple, step-by-step wizard (Upload Image -> Add Details -> Set Price) with large, intuitive buttons, catering specifically to artists who lack technical expertise.

3. Discovery, Search & Filtering

- User Quotes Grouped: "Hard to find exact sizes," "Too much irrelevant digital art," "I have a strict budget of ₹5000."
- UI Actionable Insights: The Buyer's Home Screen must feature advanced categorization. Visual filter chips for 'Art Style' (Abstract, Portrait, Traditional) and easy-to-use slider UI for 'Budget' and 'Canvas Dimensions' must be implemented to reduce the cognitive load on the buyer.

4. Post-Purchase Experience & Logistics

- User Quotes Grouped: "Artists never reply after I pay," "I worry if the canvas will break during delivery," "Need tracking links."
- UI Actionable Insights: The app cannot just be a catalog; it must handle the post-purchase anxiety. A highly visual 'Order Tracking Timeline' (Ordered, Packed, Shipped, Delivered) must be integrated into the 'My Orders' section. Additionally, an in-app messaging feature is required so buyers and sellers can communicate securely without sharing private WhatsApp numbers.

Conclusion: The Affinity Diagram successfully transformed scattered user opinions into clear design goals. It proves that while visual aesthetics are important for an art app, the core UX must focus heavily on security, simple navigation, and transparent communication.

6.8 User Personas

Overview

User Personas are fictional, yet highly realistic, representations of our ideal customers based on the extensive quantitative and qualitative research conducted. Creating these personas helps the design team internalize the user's context, deeply understand their pain points, and build UI/UX features that cater specifically to their needs. For the "Arto" application, we have developed two primary personas representing the dual nature of our platform: The Artist (Seller) and The Art Collector (Buyer).

User Persona 1: The Independent Artist (Seller)

Figure 6.8.1: User persona 1

User Persona 2: The Art Enthusiast & Designer (Buyer)*Figure 6.8.2: User Persona 2*

6.9 Key Insights & Problem Definition

Key Findings from User Research:

- **Scattered Information:** Information regarding authentic handmade art is highly scattered across unverified social media profiles, making the discovery process very difficult for buyers.
- **Complex Store Setup:** Independent artists and rural craftsmen strongly struggle with the complicated onboarding processes, GST requirements, and high commission fees on existing global e-commerce platforms like Amazon or Etsy.
- **Trust and Security Deficit:** Buyers face a severe lack of trust and fear of online scams when asked to transfer money directly via UPI through Instagram or Facebook DMs.
- **Missing Product Details:** Crucial details necessary for buying art, such as exact physical canvas dimensions (Height x Width) and materials used, are frequently missing on social media posts.
- **Absence of Order Tracking:** The current manual buying process causes severe post-purchase anxiety because independent sellers rarely provide automated tracking links or delivery updates.
- **Lack of Emotional Connection Tools:** Buyers want to know the story behind the artwork, but current platforms fail to provide a dedicated space for "Artist Biographies" or "Certificates of Authenticity."

Final Problem Statement:

"Users face difficulty in buying and selling authentic handmade art due to scattered information on social media, complex store setups on traditional platforms, and a severe lack of secure payment and order tracking systems."

7. Requirements Analysis

7.1 Design Thinking Process

The development of the "Arto" application strictly follows the 5 stages of the Design Thinking methodology to ensure a user-centric approach:

1. **Empathize – Understand users:** Conducted surveys and interviews to understand the frustrations of independent artists (complex platforms) and art buyers (fear of scams).
2. **Define – Identify problem:** Clearly defined the core problem: the need for a simplified, secure, and dedicated marketplace for handmade art.
3. **Ideate – Generate ideas:** Brainstormed solutions such as a document-free seller onboarding process, advanced size filters, and a visual order tracking timeline.
4. **Prototype – Create design:** Developed low-fidelity paper sketches and mid-to-high-fidelity digital screens using Figma to visualize the user flow.
5. **Test – Validate with users:** Shared the prototypes with target users to gather feedback on navigation and ease of use, making iterative improvements.

7.2 Functional Requirements (User Actions)

These are the core features and actions that the system must allow users to perform:

- User can create an account, log in, and securely reset their password.
- User can easily switch between a 'Buyer Profile' and a 'Seller Dashboard'.
- Seller can upload multiple images of their artwork, set prices, and add descriptions.
- Buyer can search for artworks and apply filters (by Category, Price, and Dimensions).
- Buyer can add items to a shopping cart and proceed to a secure checkout.
- User can track the live status of their orders (Ordered, Shipped, Delivered).

7.3 Non-Functional Requirements (UX Factors)

These are the quality attributes and UX factors that ensure the application runs smoothly:

ARTO

- **Fast Loading:** High-resolution artwork images must load quickly using image optimization techniques.
- **Easy Navigation:** The user interface must be intuitive, requiring zero learning curve for non-technical artisans.
- **Security:** The payment gateway and user data must be highly encrypted to prevent fraud.
- **Accessibility:** The app must have clear, readable typography and high color contrast for better visibility.

7.4 User Stories

User stories help define specific features from the perspective of the end-user.

- **Format:** "As a [user], I want [goal] so that [reason]"

Examples for Arto Application:

- "As an **independent artist**, I want to **upload my artwork in under 3 steps** so that **I don't waste time on complex technical setups.**"
- "As an **art buyer**, I want to **filter paintings by exact dimensions** so that **I can find a piece that fits perfectly on my living room wall.**"
- "As a **buyer**, I want to **use a secure payment gateway** so that **my money is safe from social media scams.**"
- "As a **seller**, I want to **see the exact commission deducted upfront** so that **I know my final earnings transparently.**"
- "As a **user**, I want to **see a real-time order tracking timeline** so that **I know exactly when my fragile parcel will arrive.**"

8. System Design

8.1 User Flow Diagram

A user flow diagram illustrates the step-by-step path a user takes to complete a specific task within the "Arto" application. It maps out the logical sequence of screens from the moment the user opens the app to the completion of a goal, such as uploading an artwork or purchasing a painting.

Figure 8.1.1: User Flow Diagram

8.2 Information Architecture

The Information Architecture (IA) diagram represents the hierarchical structure and organization of the "Arto" application. It acts as a visual sitemap, showing how different screens, categories, and functions are connected. A well-structured IA ensures that both artists and buyers can navigate the app without feeling lost.

Core Structure of Arto:

- **Authentication:** Login, Sign Up, Forgot Password.
- **Buyer Interface:** Home Screen, Search & Categories, Product Details, Shopping Cart, Checkout, My Orders.
- **Seller Interface:** Seller Dashboard, Active Listings, Add New Artwork, Earnings & Analytics.
- **Settings:** User Profile, Switch Account Mode, Help & Support.

ARTO

Figure 8.2.1: Information Architecture

Main Application Hub: The central "Arto App" node acts as the primary gateway, allowing users to seamlessly switch between the buying and selling modes.

Artist (Seller) Account Flow: This section provides independent creators with the necessary tools to manage their digital store. It branches into:

- **Seller Dashboard:** An overview of store performance and notifications.
- **Add New Artwork:** A streamlined interface to upload images and product details.
- **My Shop / Listings:** To view, edit, or delete currently active art listings.
- **Seller Profile:** To update personal details and the artist's biography.

Collector (Buyer) Account Flow: This section is tailored for art enthusiasts to easily discover and purchase authentic art. It branches into:

- **Home / Explore:** The main feed displaying various art categories and recommendations.
- **Search & Filters:** Advanced tools to find specific art styles, sizes, or price ranges.
- **Cart & Checkout:** A secure, step-by-step process for reviewing items and making payments.
- **My Orders:** A dedicated space to track live deliveries and view past purchases.

8.3 Information Architecture

Overview:

Low-fidelity wireframes are rough, hand-drawn paper sketches that serve as the first visual representation of the "Arto" application. The primary goal of these sketches is to quickly brainstorm ideas, establish the visual hierarchy, and map out the basic placement of UI elements (like buttons, images, and text) without getting distracted by colours or typography.

Figure 8.3.1: Log in/Sign up Wireframe

Figure 8.3.2: Add New Artwork Wireframe

Figure 8.3.2: Profile Seller/Buyer Wireframe

Figure 8.3.4: Seller Dashboard Wireframe

Figure 8.3.5: Seller home page Wireframe

Figure 8.3.6: Buyer home page Wireframe

Figure 8.3.7: Main Product page Wireframe

Figure 8.3.8: Cart page Wireframe

Figure 8.3.9: Your order page Wireframe

Figure 8.3.10: Checkout page Wireframe

Figure 8.3.11: Notification page Wireframe

Figure 8.3.12: Wishlist page Wireframe

Explanation of Screens:

The paper sketches above demonstrate the initial thought process and structural layout for three core screens of the application:

1. **Login / Sign Up:** This screen outlines the basic authentication flow. It includes clear input fields for user credentials (email/password), primary Call-to-Action (CTA) buttons, and placeholders for alternative login methods at the bottom.
2. **Add New Artwork:** This wireframe is designed for the seller's upload interface. It features a large dotted placeholder box at the top for image uploads, followed by several input lines for product details (like title, description, and price), and a prominent 'Publish' button at the bottom.
3. **Profile Page (Seller/Buyer):** This layout acts as the user's central hub. It starts with a circular profile picture at the top, followed by three quick-access icon buttons (likely for Wishlist, ratings, or notifications), and a structured list of navigable menu options below.
4. **Seller Dashboard:** This screen gives independent artists a quick overview of their business performance. It includes placeholders for key summary metrics (like total earnings or profile views) at the top, a line graph in the middle for performance tracking, and a list of recent orders or notifications at the bottom.
5. **Seller Home Page (My Shop):** This represents the artist's digital storefront. It features a promotional banner at the top and a grid layout displaying their uploaded artworks. Importantly, this screen includes a prominent '+' (Add) floating action button at the bottom right, allowing sellers to quickly upload new art.
6. **Buyer Home Page (Explore):** This is the main discovery screen for art collectors. While it shares a similar layout with a search bar, a top banner, and a grid of artworks to browse, it is exclusively tailored for shopping. Therefore, the upload ('+') icon is intentionally omitted from the buyer's navigation flow to prevent user confusion and keep the focus purely on purchasing.
7. **Main Product Page:** Displays the detailed view of a selected artwork. It features a large image placeholder at the top, detailed description lines below, and a sticky bottom navigation bar with a clear "Buy" or "Add to Cart" CTA (Call-to-Action) button.
8. **Cart Page & Checkout:** The "Cart" screen lists selected items with layout boxes for product thumbnails, quantities, and a total price summary. The "Checkout" screen outlines the necessary input fields for shipping addresses and payment details, leading to a final confirmation button.
9. **Notification (Order Success):** A highly visual success screen featuring a large checkmark to confirm the transaction is complete, along with an Order ID placeholder and a "Continue" button.
10. **Your Order & Wishlist:** The "Your Order" page provides a summary and tracking status of a purchased item. The "Wishlist" screen uses a structured grid layout with distinct 'heart' icons on each image placeholder, allowing buyers to easily view their saved or favourite artworks.

8.4 Mid-Fidelity Wireframes (Digital)

11. **Overview:** Mid-fidelity wireframes are the digital representation of the "Arto" application created using Figma. At this stage, the focus is entirely on precise layout, 8px grid alignment, spacing, and information hierarchy without the distraction of final colours, images, or branding. This ensures that the core user experience and navigation are highly intuitive.

Explanation:

- **Login / Sign Up Screen:** This screen provides a clean interface for users to access their accounts or register. It includes essential input fields for email and password, along with clear primary call-to-action buttons.
- **User Profile Page:** Acting as the central user hub, this page allows users to view their personal details. It features a profile picture placeholder, user statistics, and organized menu options for account settings.
- **Seller Dashboard:** The main analytics page for artists, featuring placeholders for earnings summaries and an order status graph to easily track business performance.
- **Add New Artwork Screen:** A structured form layout enabling artists to upload artwork images, input the product title, price, and description, and finally publish the listing.
- **Seller Home Page (My Shop):** This screen acts as the artist's digital storefront, displaying all active listings in a grid format. It features a prominent '+' (Add) floating action button at the bottom for quick new uploads.
- **Buyer Home Page (Explore):** The primary discovery screen for art collectors. It features a search bar, category filters, and a visual grid of the latest artworks to browse.
- **Product Details Page:** Highlights the selected artwork with a large image placeholder, physical dimensions, material details, artist information, and a prominent 'Buy Now' button.
- **Cart & Checkout:** Allows users to review their selected artworks, input shipping addresses, and securely enter payment details in a step-by-step flow.
- **Order Notification:** A clear success screen displayed post-payment, providing an 'Order Confirmed' checkmark and a button to continue tracking the order.

8.5 Design System

Overview: A design system is a collection of reusable components, guided by clear standards, that can be assembled together to build any number of applications. For the "Arto" application, this design system ensures visual consistency, speeds up the UI development process, and provides a seamless user experience across all screens.

ARTO

Figure 8.5.1: Arto Application Design System & UI Kit

1. Colour System

The colour palette is designed to maintain visual consistency. Blue is used as the primary colour to highlight important interactive elements, while neutral colours are used for background and text to ensure readability.

1. Color Variable

Figure 8.5.1: Arto Application Colour System

ARTO

Type	Colour	Code
Primary	Blue	#0E00D0
Secondary	Teal	#7BD5D9
Background	White	#FFFFFF
Text	Black	#000000
Error	Red	#FF0000

2. Typography System

A consistent typography system is used to maintain readability and hierarchy. Larger fonts are used for headings, while standard sans-serif fonts are used for body text.

2. Typography

Figure 8.5.2: Arto Application Typography System

Type	Font Family	Font Size	Weight
H1	Nico Moji	36px	Regular
H2	Roboto	35px	Medium
Section Title	Inter	24px	Semi Bold
Button Text	Inter	20px	Semi Bold

ARTO

Body	Inter	16px	Regular
------	-------	------	---------

3. Components

Reusable components such as buttons and input fields are designed to maintain consistency across all screens.

- **Buttons:**
 - Primary Button: Solid blue background with white text (e.g., "Add New Artwork").
 - Secondary Button: Outline style or text-only buttons.
 - Error/Alert Button: Solid red background (e.g., "Logout").
- **Input Fields:** Include clear placeholder text (e.g., "Enter your Age"), border with focus states, and visibility icons for passwords.

Old Password

Figure 8.5.4: Arto Application Input Field System

4. Spacing & Layout (Grid System)

A consistent spacing system based on an 8px grid scale is used to maintain alignment and visual balance across the interface.

- Small spacing: 8px
- Medium spacing: 11px to 25px
- Large spacing: 28px to 30px
- Border Radius: Specific roundness applied to corners ranging from 8px to 26px for a modern UI look.

Figure 8.5.5: Arto Application Input Spacing & Grid System

8.6 Accessibility Considerations

To ensure the "Arto" application is usable by everyone, including users with visual or motor impairments, the following accessibility guidelines were implemented:

- **Proper Colour Contrast:** A high contrast ratio is maintained by using dark text (Black) and primary actions (Deep Blue) against a clean White background, ensuring maximum readability.
- **Readable Fonts:** 'Inter', a highly legible sans-serif font, is used throughout the app with a minimum body size of 16px to prevent eye strain.
- **Large Touch Targets:** All clickable elements, especially primary buttons and input fields, are designed with adequate height and spacing to prevent accidental taps and ensure easy navigation on mobile devices.

8.7 Prototype

The prototype connects the digital wireframes and UI designs to simulate the real application experience before development.

ARTO

Figure 8.7.1: Figma Prototype Navigation Flow

Figure 8.7.2: Figma Prototype Navigation Flow

Explanation: Interactive elements such as buttons and bottom navigation bars are used to navigate between screens. The navigation flow starts from the login screen, where users enter credentials. After login, artists are directed to the Seller Dashboard, while buyers are taken to the Home (Explore) screen. For example, clicking the "Buy Now" button on the product

details page takes the user to the checkout screen, followed by a final order confirmation screen. The back button consistently returns users to the previous page.

8.8 Micro-interactions

Overview: Micro-interactions are small, functional animations or visual state changes that enhance the user experience by providing immediate feedback. In the "Arto" application, these subtle changes assure the user that their actions (like uploading a file or saving an item) have been successfully registered by the system.

Tell us the story behind this piece, the inspiration materials used, or dimensions...

Figure 8.8.2: Micro-interaction - Product Image Preview

Figure 8.8.3: Micro-interaction - Wishlist Toggle

Explanations:

Example 1: Profile Image Upload

Uploading a profile picture triggers a visual confirmation, ensuring the user that their identity is being set up correctly.

- **Interaction Name:** Profile Avatar Update
- **Where Used:** Upload Profile Photo screen
- **Purpose:** System status visibility and confirmation of upload.

ARTO

- **Effect:** The default blank avatar placeholder is instantly replaced by the user's selected photograph. When user click the photo Profile photo is zoom out with smooth animation.

Example 2: Artwork Image Preview

When a seller adds a new artwork, the system provides an immediate preview of the selected file before the final upload.

- **Interaction Name:** Image Upload Preview
- **Where Used:** Add New Artwork screen
- **Purpose:** Build user confidence by displaying the actual file selected.
- **Effect:** The dotted 'Select Image' placeholder box visually transforms into a high-resolution thumbnail of the artwork (e.g., the floral wall art).

Example 3: Wishlist 'Like' Button A toggle micro-interaction is used on the product cards to allow users to quickly save items to their Wishlist.

- **Interaction Name:** Wishlist Toggle
- **Where Used:** Art Discovery / Home screen product cards
- **Purpose:** Provide instant visual feedback that the artwork has been saved.
- **Effect:** When the user taps the empty outline heart icon, it immediately changes to a solid blue filled heart.

Designed by Arpan Ranva1

9. Final Ui Design

9.1 High-Fidelity Screen Designs

The image shows a high-fidelity UI design for a mobile application's login and sign-up screen. The background is a light blue gradient. At the top left is a back arrow icon, and at the top center is the 'ARTO' logo in a bold, blue, sans-serif font. Below the logo, the text 'Join the community of creators' is displayed in a large, black, sans-serif font. Underneath this, a smaller line of text reads 'Start your journey into the world of handmade art.' There are two main buttons: a white 'Log In' button with a blue outline and a solid blue 'Sign Up' button. Below these are two social login options: 'Continue with Facebook' with the Facebook 'f' logo and 'Sign up with Google' with the Google 'G' logo. A horizontal line with the word 'OR' in blue separates these from the standard login fields. The fields are labeled 'Your Name', 'Email Address', and 'Password'. The 'Your Name' field contains the placeholder text 'Enter your name'. The 'Email Address' field contains the placeholder text 'email@example.com'. The 'Password' field contains six asterisks '*****' and a toggle icon (an eye) on the right. At the bottom right, there is a link that says 'Forget Password?' in blue.

9.2 Screen Explanation

1. Login & Registration Screen

- **Screen Name:** Join the Community (Log In / Sign Up)
- **Purpose:** To authenticate users and allow them to securely join the platform.
- **Key Elements:** Social login options (Facebook, Google), standard input fields (Name, Email, Password), and a prominent 'Create Account' button.
- **UX Decisions:** Providing quick social login options reduces friction during the onboarding process, while a clean white background makes the primary blue Call-to-Action (CTA) button stand out clearly.

2. Artist Content Upload Interface

- **Screen Name:** Add New Artwork
- **Purpose:** To enable artists to seamlessly upload and list their new handmade art pieces.
- **Key Elements:** A large dashed image upload placeholder, input fields for Item Type, Price (with ₹ symbol), a detailed Description box, and an 'Upload' button.
- **UX Decisions:** The dashed border around the upload area visually indicates a 'drop zone', making the primary action of adding a photo highly intuitive for the seller.

3. Seller Analytics & Management

- **Screen Name:** Seller Dashboard
- **Purpose:** To provide artists with a quick, comprehensive overview of their business performance and active listings.
- **Key Elements:** Earnings and Orders summary cards, an 'Add New Artwork' shortcut, a weekly sales line graph, and a scrollable list of 'Live' products.
- **UX Decisions:** Visualizing data through graphs and bold summary numbers allows sellers to assess their performance at a single glance without reading complex tables.

4. Buyer Marketplace & Exploration

- **Screen Name:** Art Discovery (Home Screen)
- **Purpose:** To help buyers explore, search, and discover various art pieces effortlessly.
- **Key Elements:** Top search bar, quick-access category filters (Paint Art, Metal Art, etc.), a promotional banner, and a grid of product cards featuring Wishlist icons.
- **UX Decisions:** The visual grid layout maximizes the display area for artwork images, making the products the absolute center of attention to drive user engagement.

5. Detailed Product View

- **Screen Name:** Product Details Page
- **Purpose:** To provide in-depth visual and textual information about a specific artwork to encourage a purchase.

ARTO

- **Key Elements:** A large high-quality product image, price, detailed product description, quality highlights, and a Wishlist icon.
- **UX Decisions:** Utilizing ample whitespace around the text and a large hero image helps buyers inspect the product visually before making a buying decision.

6. Cart and Order Summary

- **Screen Name:** Your Order (Cart Page)
- **Purpose:** To allow users to review their selected items, adjust quantities, and view the final cost breakdown.
- **Key Elements:** Product thumbnail, quantity adjuster (+ / -), detailed price breakdown (MRP, Fees, Discount, Total), and a 'Checkout' button.
- **UX Decisions:** Providing a completely transparent price breakdown builds trust, and the vibrant blue 'Checkout' button clearly guides the user to the next critical step.

7. Secure Checkout Interface

- **Screen Name:** Payment Screen
- **Purpose:** To securely collect payment information and finalize the transaction.
- **Key Elements:** Saved payment methods, an 'Add New Card' form (Card Number, Expiry, CVV), an order summary, and a 'Pay Now' button.
- **UX Decisions:** Using familiar input fields with visual icons (like the credit card illustration) reassures the user about the security and legitimacy of the payment process.

8. Delivery Tracking System

- **Screen Name:** Track Order
- **Purpose:** To provide real-time updates on the delivery status of the purchased artwork.
- **Key Elements:** Estimated delivery time prominently displayed, a vertical step-by-step timeline (Order Placed, Packed, Shipped, Out for Delivery), and the product thumbnail.
- **UX Decisions:** A vertical visual timeline clearly communicates the progress of the shipment, effectively setting user expectations and reducing customer anxiety.

9. Post-Purchase Success Screen

- **Screen Name:** Order Confirmation
- **Purpose:** To assure the user that their payment was successful and provide a reference for their purchase.
- **Key Elements:** A large success checkmark badge, a 'Thank You' message, a generated Order ID, an item summary, and a 'Continue Shopping' CTA.

- **UX Decisions:** Strong reassuring visual cues (like the checkmark) reduce post-purchase anxiety, while the 'Continue Shopping' button keeps the user engaged within the app.

9.3 Prototyping & Interaction

Figure 9.10: Figma Prototyping and Navigation Flow

Navigation Flow Overview: The prototyping phase connects all static UI screens to create a fully clickable representation of the application. The navigation flow starts from the Login/Sign-Up screen, where users authenticate their credentials. After logging in, users are directed to their respective primary screens: the Home/Discovery screen for buyers or the Dashboard for sellers.

Key Interactions & Click Behaviour's:

Interactive elements such as buttons, bottom navigation bars, and icons are used extensively to navigate between screens.

- **Button Click:** Clicking primary buttons moves the user forward in the flow. For example, clicking the "Checkout" button on the cart page takes the user directly to the payment screen, and clicking "Add New Artwork" opens the image upload form.
- **Back Button:** The 'Back' arrow icon located at the top-left of secondary screens consistently returns the user to the previous screen, ensuring they can easily reverse their actions.

ARTO

- **Navigation Bar:** The bottom navigation icons allow users to quickly switch between core sections of the app, such as Home, Cart, Wishlist, and Profile, from anywhere in the application.

Figure 9.11: Advanced Prototyping - Seller Upload & Image Selection Flow

Detailed Interaction Flow: This specific section of the prototype demonstrates the complex interaction logic within the Seller's "Add New Artwork" process.

- **Profile to Upload:** The flow seamlessly connects the initial 'Become Seller' profile setup screen directly to the 'Add New Artwork' interface.
- **Dynamic Image Selection:** The dense network of blue interaction lines illustrates a dynamic image gallery selection process. When a seller taps 'Select Image', they are navigated through a gallery grid. Clicking any specific image in the grid instantly routes the user back, updating the preview placeholder on the main upload screen with their selected image.
- **Realistic Feedback:** This complex wiring ensures that the prototype behaves exactly like a real, coded application, giving the user accurate visual feedback based on their specific choices before they hit the final 'Next' or 'Upload' button.

10. Implementation & Tools

10.1 Tools & Technologies (Figma, Adobe XD, etc.)

Figure 10.1.1: Figma Workspace and Artboards

- Figma: Figma was the primary tool used to design the wireframes, establish the Design System, and create the final high-fidelity UI screens and interactive prototypes.
- FigJam: FigJam was utilized during the initial research phase for brainstorming, creating the User Flow diagrams, and mapping out the Information Architecture.

10.2 Design System Implementation (Component Usage in UI Screens)

Figure 10.2.1: Reuse of Components Across Screens

1. Reuse of Components Reusable components such as the primary blue Call-to-Action (CTA) buttons, text input fields, and product cards are used consistently across all screens. For example, the exact same button component is used for both the "Log In" and "Pay Now" actions. This reduces design effort and ensures uniformity throughout the application.

2. Consistency in UI The design maintains consistency by using a uniform colour palette, the 'Inter' typography system, and a standardized spacing grid across all screens. This creates a cohesive and professional user interface.

3. Connection with Design System The design system defined in Section 8.5 has been implemented across all UI screens, ensuring consistency in visual elements and improving the overall user experience.

11. Usability Testing & Iteration

11.1 Usability Testing Method

Usability testing was conducted using a task-based method. Users were asked to perform specific tasks such as registering an account, searching for artworks, uploading new art, and completing a checkout process. Their actions, difficulties, and feedback were observed and recorded to evaluate the overall usability of the "Arto" application.

11.2 Testing Scenarios & Tasks

The following primary tasks were given to specific test users to evaluate the real-world usability of the "Arto" application:

1. Task: Create a new account and set up a profile.

- **Assigned to:** Arpit (Testing as a Buyer)

2. Task: Upload a new artwork listing with an image, description, and price.

- **Assigned to:** Priya (Testing as a Seller)

3. Task: Search for the 'Metal Art' category and add a favourite item to the Wishlist.

- **Assigned to:** Amit (Testing as a Buyer)

4. Task: Review the items in the cart and complete the payment checkout process.

- **Assigned to:** Kalpesh (Testing as a Buyer)

11.3 User Feedback Analysis

User Name	Task Evaluated	Issue Faced	Suggestion
Priya	Upload Artwork	Confused whether the artwork image was successfully attached or not before publishing.	Show a real-time thumbnail preview of the image immediately after selection.
Amit	Search & Discovery	Found it time-consuming and hard to find specific art types just by scrolling down the home page.	Add quick category filter tabs (like Paint Art, Metal Art) at the top of the Home screen.
Neha	Checkout Process	The final price breakdown (MRP, Fees, Discount) was slightly confusing to read at a glance.	Highlight or bold the final 'Total Amount' more clearly above the 'Pay Now' button.

11.4 Iterative Design (Before vs. After Comparison)

Before:

- Art categories were mixed together.
- Navigation to find specific art types was confusing and took too much time.

After:

- Added horizontal category tabs (Art Work, Paint Art, Metal Art, Boho Art) at the top.
- Reduced search time and added a clear, guided flow.

Explanation Based on user feedback, several improvements were made to the design. The artwork discovery process was simplified by introducing quick-access category tabs directly below the search bar. This change made navigation much more intuitive and allowed buyers to filter art instantly, resulting in a better user experience.

Figure 11.1.1: Iterative Design (Before vs. After Comparison)

12. CONCLUSION

12.1 Advantages of the Project

- **Easy to Use:** The "Arto" application provides a highly intuitive and clean interface, making it simple for both artists to upload their work and for collectors to browse and buy.
- **Saves Time:** By centralizing the art discovery process and providing quick category filters, it significantly reduces the time buyers spend searching for specific handmade items.
- **Empowers Independent Creators:** It gives local artists and craftsmen a dedicated digital storefront to showcase their talent to a wider audience without needing technical knowledge.

12.2 Limitations of the Project

- **Limited Features in Prototype:** Currently, the application focuses only on the core buying, selling, and order tracking functionalities. It lacks advanced interactive features like live art auctions.
- **No Real-Time Transactions:** As this is a UI/UX design project, the payment and checkout processes are simulated and not connected to a real banking database.

12.3 Future Enhancements

- **Add Real Payment Integration:** Implement secure, real-world payment gateways (like UPI, Credit Cards, and PayPal) to facilitate actual financial transactions between buyers and sellers.
- **AR (Augmented Reality) Preview:** Add an advanced AR feature that allows buyers to use their phone camera to see exactly how a painting or vase will look in their own room before purchasing.
- **In-App Messaging System:** Introduce a direct chat feature allowing art collectors to communicate with artists for custom artwork commissions or personalized orders.

13. References

Websites:

- **Behance (www.behance.net):** Used for UI/UX inspiration, studying modern layout trends, and colour palette ideas for art marketplaces.
- **Dribbble (www.dribbble.com):** Referenced for micro-interaction concepts and mobile app component styling.
- **Material Design Guidelines (m3.material.io):** Referred to for standardizing button sizes, spacing systems, and accessibility contrasts.
- **Mobbin (mobbin.com):** Used to analyze real-world user flows of existing e-commerce and creative apps.

Tools Used:

- **Figma (www.figma.com):** Used for creating digital wireframes, UI design, components, and high-fidelity interactive prototypes.
- **FigJam:** Used for brainstorming, creating user flow diagrams, and structuring the information architecture.
- **Google Forms:** Used for conducting user research and collecting survey data.

B. Additional Wireframes (if any)

Log In/Sign Up- 7

The wireframe shows a login and sign-up interface for 'ARTO'. At the top is the 'ARTO' logo. Below it is the heading 'Welcome Back' followed by the tagline 'Start your journey into the world of handmade art.' There are two buttons: 'Log In' (dark blue) and 'Sign Up' (light blue). Below these are two input fields: 'Email Address' with the placeholder 'email@example.com' and 'Password' with a masked password '*****' and a toggle eye icon. A 'Forgot Password?' link is positioned to the right of the password field. A large dark blue 'Sign In' button is centered below the inputs. At the bottom, a line of text states 'By joining, you agree to our [Terms](#) and [Privacy Policy](#)'.
